

MEDIA DESTRUCTION THAT OFFERS ADDED PEACE OF MIND

Media destruction offers that added peace of mind. Disks are shredded to particle sizes of between 2mm and 5mm which far exceeds the most stringent government standards.

Availability of on-site media destruction - the Agilitas difference

Vehicles use a proprietary combined magnetic degaussing technology integrated into the innovative shredding process. By integrating the degaussing process there is no opportunity for human error or short-cuts.

The degaussing process irretrievably destroys the magnetic data on the drive. The magnetic field is so strong it creates an eddy current which slows the fall of the of the disk platter in to the shredding stage. The disk is then shredded to particle sizes of between 2mm and 5mm.

Any one of these processes is enough to make the data irretrievable.

OFF-SITE	ON-SITE
Cost:	
1-99 drives £10 each	1-499 drives (minimum £600 site visit)
100+drives £6 each	500+ drives £3 each
Return carriage included	
Turn around time:	
4-5 working days from receipt	Same day (dependant on quantity - max 500 per day)
CoD - Certificate of data destruction:	
Electronic certificate of of destruction - Available on request	Electronic certificate of of destruction - Provided after completion
